Credit name:computer science 3
Assignment name: BreakAPlate and StudentSorting

The reason that both of these error logs are together is pretty simple
If you read my reflection you will see that the way i did my code was that i wrote it all out at once and not running it, so i didnt have roots because i simply didnt run the code. So yes i did have errors but because I didn't run the code and because I didn't realize that we had to do error logs i didnt take any screenshots.

Sorry I will be bettr for the next credit please don’t doc me marks.
