Credit name:computer science 3
Assignment name: BreakAPlate

Understanding the problem
I approached the challenge by first feeding the textbook, I tried to just copy everything line by line from the textbook, but they had extra things in there that made it hard, but it did give me a sort of set up for my code, although i think at some points i did stray away from the baseline

Planning the solution
I didnt really plan out the code it sort of just happened, like i used the text book but i wouldnt say that I planned anything, it was all spur of the moment.

Implementation
Because there was no plan i didnt really care about each part o the code working i just ended up writing out all the code and then after that i would look at the errors before running it and then go through and fix all of them, it probably took me more time but i was able to get the correct end result.

Overcoming challenges
Because I wrote it all out at once there were alot of things that were not correct that I had to fix before I ran the code, and that just took me a long time. If i got stuck i had emmett and leif next to me and they were able to help me, but if they were not able to help i would put a small section of the code into google and i would ask it to explain to me why i have an error.

Learning
I remembered that it is the easiest to do if you break it down into 5-10 line segments and work on it from there, but I think that with this new type of code I kind of just got surprised and forgot the fundamentals.

Assignment name:StudentSorting

Understanding the problem
I just looked at the textbook and my previous code and started coding

Planning the solution
I wrote all of the code at once before i ran it once, i was lucky that i was able to reuse my code from the previous skillbuilder

Implementation

I attempted the code all at once(big mistake) . I did it all at once and then had to go back through it and try to fix and understand the lines of code that I wrote.

Overcoming challenges
The hardest part was fitting the images in the right size, and i couldnt do it and I gave up on it.

Learning
I learned that I need to do what I did last year and the year before that, i need to break it down into manageable sections, and then after that I should check my steps with the textbook.
